

# Reflections

My task was to create a python script that has a bot log into an instagram account, find a post, and message all of the users who commented on that post. After having successfully completed this task, my goal was to make the console app more user friendly. I wish I had more experience or time with the python libraries that I was using, so I could make a better experience for the user. I ideally would make the feedback in the console more concise and easy to read.

While developing this script I ran many tests on a throwaway account, triggering authentication requirements on every successful execution of the code. Every time I would call the login function from the Instabot library, it would be raised as suspicious activity by instagram. After checking the logs created in my project, I realized that this login function may have been performing API calls too quickly.

Overall, I enjoyed the process of working with these new libraries, and creating something that had tangible results. I would be happy to join your team and have the opportunity to work with talented professionals, and contribute to meaningful projects. I am hungry to continue learning and ready to commit my time to helping your efforts. Thank you, I look forward to hearing back from you.
